---

Hello there, Can you please check the following website <http://beta.mtv.com.lb/> This is done using GWT+third party libraries like gwt2swf, gwt\_Facebook\_Connect... I wanna check how fast it is to load and stream live comments on your side. I have hosted the website over a cloud server to test it in case i wanna revert the live comments to live chat. I am building a web protal for a tv station and might need some suggestion/feedback from you guys. regards, ruds

bueno mac OS X.5.8 safari 4.04 good ff 3.5.3 good pc windows 7 EC build 7100 chrome 3.0.195.33 good ie 8.0.7100.0 good ff 3.0.14 good PS3 browser the only thing that appears is the header. While checking the above, my modem blew out... I was streaming a movie from the PC to the PS3 at the same time. Called tech support and a new modem is in line. Router seems okay. I was enjoying look at your clean site and the half page worth of source code. Good job. What is the PS3 browser solution?

Sent from my iPhone I'm not checking on my phone, it's my only means to the outside world.
